

Belize high frequency inverter structure

Overview

An inverter system for delivering power at high frequency (3 to 30 MHz) comprises a pair of inverters 12a, 12b, with a first inverter 12a directly coupled to a load 14 and a second inverter 12b coupled to the load 14 via an immittance converter 16.

The Sandia Frequency Shift (SFS) uses positive feed- back to push the microinverter output current frequency out of the defined operating range, causing the micro-inverter to shut down.

Frequency inverters

The basic structure of a frequency inverter consists of a rectifier, which usually feeds an intermediate circuit (there are also models without an intermediate
