

China's solar power generation outlook

Overview

The China Photovoltaic Industry Association expects 190GW-220GW of new installed capacity this year, and even bigger annual additions from 2025 to 2030. The government is also likely to push for more installation closer to China's eastern regions, where energy demand is highest.

[China's Solar Power Generation Overtakes Wind for First Time](#)

China's solar power generation overtook wind for the first time last year as a boom in cheap panels continues to reshape the country's grid and climate trajectory.

Solar power in China

OverviewControversyHistorySolar resourcesSolar

photovoltaics Concentrated solar power Solar water heating Effects on the global solar power industry

The government subsidies for solar power energy projects have been considered "unsustainable" as the costs of subsidizing a rapidly growing industry are massive and some of China's struggles dealing with the costs have become visible. The renewable energy fund, which is paid by consumers, has a 100 billion yuan deficit while tariff payments have occasionally been paid late. Government subsidies for solar power have also been attributed to over construction, as many solar power projects have been f
