

Principle of solar silicon chip power generation

Overview

In a silicon solar cell, a layer of silicon absorbs light, which excites charged particles called electrons. When the electrons move, they create an electric current.

Silicon Solar Cell

Crystalline silicon PV modules are produced through several steps. Silicon dioxide (SiO_2) or silica from quartz sand is reduced into metallurgical-grade silicon (MG-Si) in an arc furnace.

[Principle of solar silicon chip power generation](#)

The device structure of a silicon solar cell is based on the concept of a p-n junction, for which dopant atoms such as phosphorus and boron are introduced into intrinsic silicon for preparing n- or p-type
