

The best orientation for photovoltaic panels in winter

Overview

During winter in the northern hemisphere, the sun is lower, making it harder for panels to capture sunlight.

[What is the best angle and orientation for solar panels?](#)

To mitigate winter production dips, tilt your panels steeper than your latitude, around 60 degrees to maximize sunlight absorption. Installing your panels at an angle also allows snow to slide

[What's the Best Angle for Solar Panels to Get Maximum Output?](#)

Learn how to calculate the best tilt angle for home solar panels in 2026. Includes seasonal adjustments, PVWatts guidance and energy optimization tips for maximum output.

A general rule is to set your solar panel tilt equal to your latitude, then add about 10-15 degrees during winter months. For example, in Montreal, which is around 45 degrees latitude, panels

While the difference is less prominent in the shoulder seasons, during summer months, a shallower tilt can really help you capture the intense, high-angle sunlight, while in winter, a steeper tilt is more
