"This SqlTransaction has completed; it is no longer usable"

```
{ return transaction nnection.Query(command,  
new DynamicParameters(param), transaction,  
commandType:  
CommandType.StoredProcedure); } } }
```

It looks as though the outer

concurrency

A transaction is a unit of work that you want to treat as "a whole." It has to either happen in full or not at all. A classical example is transferring money from one bank account to another. To

20-foot mobile energy storage container for emergency command

The emergency energy storage container adopts a lightweight design (the weight of a 20 foot container is controlled within 8 tons), which can be quickly transported to the disaster

Transaction marked as rollback only:
How do I find the cause

Participating transaction failed - marking existing transaction as rollback-only So I just stepped through my code to see where this line is generated and found that there is a catch block

[Getting "Lock wait timeout exceeded; try restarting transaction" even](#)

```
mysql> update customer set account_import_id  
= 1; ERROR 1205 (HY000): Lock wait timeout  
exceeded; try restarting transaction I'm not  
using a transaction, so why would I be getting  
this error? I
```

How do you clear the SQL Server transaction log?

The transaction log contains a lot of useful data that can be read using a third-party transaction log reader (it can be read manually but with extreme effort though). The transaction log is

The transaction manager has disabled its support for remote/network

The partner transaction manager has disabled its support for remote/network transactions*
Jumping over to SQL Client did fix my issue, which also confirmed for me that it was an EF thing.

What does a transaction around a single statement do?

BEGIN TRANSACTION / COMMIT "extends" this locking functionality to the work done by multiple statements, but it adds nothing to single statements. However, the database transaction log is

The transaction log for the database is full

I have a long running process that holds open a transaction for the full duration. I have no control over the way this is executed. Because a transaction is held open for the full duration, whe
