

Uninterruptible power supply live load

Overview

The honest answer is: most small UPS units deliver minutes at computer-sized loads -but hours are possible if the load is light (router/modem) or the battery system is much larger (external battery packs or a battery power station with UPS mode).

For desktop PC loads (hundreds of watts), many consumer UPS units deliver minutes. Use watts + battery Wh to estimate, then verify with a runtime chart or a real test.

Multiple devices rarely operate simultaneously at maximum load, so real-world power consumption typically falls below the simple arithmetic sum of individual ratings.

Uninterruptible power supply

An uninterruptible power supply (UPS) or uninterruptible power source is an electrical apparatus that provides emergency power to a load when the input power source or mains power fails.

Uninterruptible Power Systems

UPS systems are used to provide reliable and uninterrupted power for critical loads by transferring power supply from the utility to backup energy storage when a power disruption

occurs.
